

About Flexdocs

With its robust feature set, Flexdocs is an automation tool and digital forms repository that guarantees quick development and processing of medical forms.

The user will be able to finish the documentation procedure online in lieu of storing paper forms, which take up more room. Hospitals become more resource-efficient and effective as a result.

FLEX DOCS

EASY TO USE - RELIABLE - SECURE

www.intuitionhit.com

Features

1. The programme can pull important data from an EMR, including patient demographics, visit ID, and physician name, using native integration techniques. This is accomplished through smooth integration with the current medical devices and hospital information systems.
2. Bar codes can be created online with Flexdocs and printed on certain forms. In order to enable automated indexing to the patient record, users can scan bar codes.
3. With various signing devices, such as writable screens and electronic signature pads, patients can electronically sign consent forms and other documents using Flexdocs' powerful "Quick Sign" feature.
4. An administrator setting allows users to handle the "Template Designer" tool, which is one of the easy-to-use features offered by Flexdocs.

Other Features

- Paperless or paper-light process improves efficiency and saves time
- LDAP authentication with Active Directory
- Accuracy, security, and data mobility are ensured
- Printer mapping for printing of different forms
- Go-Green
